BotaVein

Bottle of 50 ml with roll-on

An oil rich in herbal active ingredients for the efficient treatment of varicose veins and blotches.

Varicose veins Overview:

Varicose veins are caused by a defect of the venous valvules (which are not tight enough) whose role is to prevent blood from flowing back in the lower part of the body. The result is a dilation of the veins, which mainly concerns the veins of the legs, because of gravity.

Varicose veins are a fairly frequent problem, one woman out of two and one man out of ten have to cope with this problem. The appearance of varicose veins is due to a combination of several factors: heredity, hormonal factors, prolonged upright station, exposure of the legs to heat, sedentary way of life and overweight.

Varicose veins are seldom painful by themselves however the accumulation of blood in the lower limbs can cause cramps and a sensation of pin and needles. Varicose veins can be the cause of three kinds of complications:

- Superficial phlebitis, which consists of an acute inflammation around a varicose vein. It can cause pain and redness along the varicose vein segment.
- A varicose vein rupture can cause a sudden and abundant haemorrhage, which can lead to a painful subcutaneous haematoma.
- Cutaneous disorders can occur in the long run such as dermatitis or varicose ulcer.

Action of BotaVein:

BotaVein acts by using an oily base added with plants and specific natural substances, which penetrate the skin to the venous fabric. The astringent and cicatrizing properties of the lotion resorb the inflammations and provide more tonicity, strength and resilience to the venous tissue.

Instructions for Varicose Veins:

Apply the lotion twice a day with the roll-on, massage gently and let dry for 20 minutes before wiping off with a soft cloth or a paper towel. It is advisable to complement this treatment with the following basic rules:

- Maintaining the legs and feet high (on a pillow) during sleep
- Physical exercises (walk, swimming) to compensate for sedentary way of life, thermal water cures can also be beneficial.
- Avoid the compression of the legs by socks, stockings or boots, which have a tourniquet effect and block blood flow.
- Avoid exposure of the legs to heat sources

Instructions for cases of blotches:

The blotches consist of the permanent and visible dilation of the capillary vessels of the skin of the face. Usually located on the cheekbones and the sides of the nose, the blotches sometimes develop in larger bluish veins.

BotaVein is also recommended for the treatment of the blotches by combining its action with the BotaDermo lotion.

Apply the lotion twice a day with the roll-on, massage gently and let dry for 20 minutes before wiping off with a soft cloth or a paper towel. Then, apply the BotaDermo lotion by spraying the lotion directly on the affected area and let dry. At night time apply a fine layer of cream on the face and let it rest for 10 to 15 minutes, remove the excess with a soft tissue and then clean with a cotton soaked with BotaDermo Lotion.

Composition:

Olive Oil, Boswelia, Baccharis, Cypress Tree, Sulfur, Turmeric, Perfums: Benzyl Alcohol, Benzyl Benzoate, Eugenol, Linalool. (Extract = Extraction by water vapour)

Complementary Treatments:

A depurative cure will always constitute an excellent basis to ensure the efficiency of almost any other targeted treatment. **DynOrgan** is a depurative that cleans vital organs and ensures the proper functioning and the stimulation of those organs (namely: the liver, spleen, pancreas, kidneys and gall-bladder).

In the specific situation of varicose veins, DynOrgan will facilitate the lymphatic drainage, which contributes to improve the venous tissue condition.

TensioReg - 100 mg Dosage:

TensioReg will improve the resilience and elasticity of the blood vessels; therefore it is highly recommendable in the situation of varicose veins.
