HPS-Care

Bottle of 100 ml with a cone shape top

Oil rich in herbal active ingredients lotion for an efficient and fast treatment of genital herpes, herpes labialis and shingles.

Herpes Overview:

There are two types of viruses in the case of herpes.

- HSV-1 (Herpes Simplex Virus), responsible for herpes labialis (cold sore, fever blister).
- HSV-2, responsible genital herpes, it can also develop itself in the anal region as well as, on the buttocks and thighs.

The virus tends to multiply in the zone where it was contracted before reaching the ganglions (nerve-knot), which are located in the lower back area in the case of the genital herpes, or in the neck under the junction of the jaw in the case of cold sore.

When herpes rashes happen, it is in fact the virus that takes the same nervous path (the other way round) it had taken earlier when it was first contracted and after having spent an incubation period during which it multiplied. These crisis (or resurgences) occur at variable frequencies and intensities depending on the people.

Shingles in brief:

Shingles is characterized by painful rashes that appear along a nerve or nerve ganglion. The chickenpox virus which is responsible for the shingles symptoms can remain dormant in the lymph nodes and then becomes reactivated after a long period of time, consequence of a weakness of the immune system, unable to control the virus. This is manifested by the appearance of cluster of vesicles, most often on the thorax or the face but all parts of the body can be affected.

Action of HPS-Care:

Up to now, there is no medication that can suppress the virus of genital herpes, however HPS-Care act in two ways:

The plants composing HPS-Care act on the infected zones by diminishing the development of the blisters and lesions, and by alleviating the irritation and pain while reducing the duration of the episode. In particular, these plants accelerate the process of healing without leaving traces on the skin.

In addition, by penetrating the skin and the nervous tissues of the infected zone, the active ingredients of the HPS-Care lotion take the same path as the one taken by the virus up to the ganglion. Thus, the antiviral properties of the plants can act directly on the virus by inhibiting its multiplication process.

Instructions:

Soak a cotton wool with the lotion and rub gently the affected areas. For women, it is also necessary to insert a lotion soaked cotton wool into the vagina and to leave it in place for two hours. Repeat this operation once or twice a day for 30 uninterrupted days. In rare cases of recurrence, repeat the treatment for one full month.

The local application of the disinfectant and antiviral lotion HPS-Care allows to dry up the lesions and to avoid further infections. In cases of repetitive genital and anorectal episodes it is advisable to apply the lotion three times a day.

In the cases of recurrence, repeat the treatment for one month and add the application of the HPS-Care lotion at the bottom of the back so that the lotion penetrates to reach the ganglions.

Composition:

Olea Europaea Fruit Oil, Boswellia Serrata Gum Extract, Pinus Pineae Kernel Extract, Baccharis Genistelloides Extract, Myrtus Communis Leaf Oil, Punica Granatum Peel Extract, Quercus Robur Bud Extract, Asphodelus Microcarpus Viviani Extract, Linalool, Limonene.

Complementary treatment:

A depurative cure will always constitute an excellent basis to ensure the efficiency of almost any other targeted treatment. DynOrgan is a depurative that cleans vital organs and ensures the proper functioning and the stimulation of those organs (namely: the liver, spleen, pancreas, kidneys and gall-bladder) with the following objectives:

- Ensure efficient elimination of toxins
- Improve the overall metabolism and general condition of vital organs

Moreover, for people undertaking a diet to lose weight, DynOrgan will help and support the whole process of losing weight by stimulating the organs implied in the elimination.

In the precise cases of genital herpes and herpes labialis, DynOrgan stimulates the liver and kidneys' functions, which improve the performance of the natural defences of the body. As a result, the HPS-Care treatment becomes more efficient.
